

# HIGH GAIN PROJECTION SCREEN

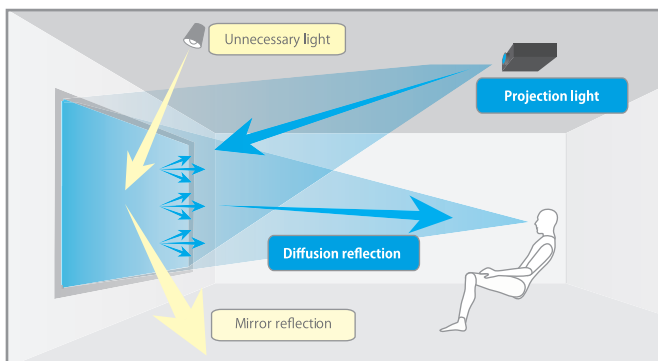

Mobile Projection Screen

## Excellent performance even in the presence of ambient light

- Features**
  - Beam spread diffuser film, a unique anisotropic light diffuser inside the screen, provides 6-8 times higher brightness, and 7 times better contrast than conventional screens, which realizes large projection with even lower power projectors.
  - Increases black levels, shadow detailing and overall color saturation.
  - Extremely flat and smooth surface preserves the original's high definition picture.

- Scenes**
  - Meeting Room**
  - Showroom**
  - Exhibition**
  - Mobile Screen**

- Principles**
  - ALBEDO™ High Gain Projection Screen realizes exceptionally brilliant images because the projected light from projector properly diffuse-reflects to audience, whereas ambient light reflects symmetrically at the screen and pass away.

Comparison under the downlight

### Specification

#### Front Projection

Gain		HG(High Gain)	CW(Conference Wide)
Gain		6.0	4.0
Viewing Angle	X	±30	±40
	Y	±30	±40

#### Rear Projection

Gain		WS (Window Screen)
Gain		5.5
Viewing Angle	X	±45
	Y	±45
